Tutorial 7

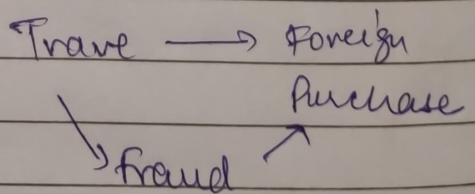

Machine Learning 2

Bayesian Network

- Increased probability of travel makes fraud more likely. Travel can cause fraud.
- Increased probability of foreign purchase makes fraud more likely. Foreign purchase is evidence for fraud.
- Travel and fraud can each cause foreign purchase. Travel explains foreign purchase and so is evidence against fraud.

True / False  
0.05 / 0.95

Travel	True	False
True	0.01	0.99
False	0.002	0.998

Travel	Fraud	True	False
True	True	0.9	0.1
False	True	0.1	0.9
True	False	0.9	0.1
False	False	0.01	0.99

Q) Foreign purchase = true  
 travel = ?  
 fraud = ?

$$\begin{aligned}
 &P(\text{Fraud} = \text{True} \mid \text{Foreign purchase} = \text{True}) \\
 &= \alpha \times P(\text{Fraud} = T \mid \text{Travel} = T) \times \\
 &\quad P(\text{Foreign purchase} = T, \text{Travel} = T, \\
 &\quad \text{fraud} = T) \times P(\text{Travel} = \text{true}) \\
 &+ P(\text{Fraud} = T \mid \text{Travel} = F) \times \\
 &\quad P(\text{Foreign purchase} = T, \text{Travel} = \text{False}, \\
 &\quad \text{Fraud} = T) \times P(\text{Travel} = \text{False})
 \end{aligned}$$

$$= \alpha [0.01 \times 0.9 \times 0.05 + 0.002 \times 0.1 \times 0.95]$$

$$= \alpha [0.00045 + 0.00019]$$

$$= 0.00064 \alpha$$

$$P(\text{Fraud} = \text{False} \mid \text{Foreign-purchase} = T)$$

$$= \alpha \left[ P(\text{Fraud} = F \mid \text{travel} = T) * \right. \\ \left. P(\text{Foreign-purchase} = T \mid \text{true} = \text{true}, \right. \\ \left. \text{Fraud} = \text{False}) * \right. \\ \left. P(\text{travel} = T) \right]$$

+

$$P(\text{Fraud} = F \mid \text{travel} = F) * \\ P(\text{Foreign-purchase} = T, \text{travel} = F, \\ \text{Fraud} = F) * \\ P(\text{travel} = F)]$$

$$= \alpha \left[ 0.99 * 0.9 * 0.05 + \right. \\ \left. 0.998 * 0.01 * 0.95 \right] \\ = \alpha \left[ 0.04455 + 0.009481 \right] \\ = 0.054031 \alpha$$

$$\alpha = \frac{1}{0.00064 + 0.054031} = 18.291$$

$$P(\text{Fraud} = \text{true} \mid \text{Foreign purchase} = T)$$

$$= 0.00064 \alpha$$

$$= 0.00064 * 18.291$$

$$= 0.01170$$

$$= 1.17\%$$

$$2) P(\text{Fraud} = T \mid \text{Foreign purchase} = T, \text{travel} = T) \\ = \alpha \times 0.00045$$

$$P(\text{Fraud} = F \mid \text{Foreign purchase} = T, \text{travel} = T) \\ = 0.04455 \times \alpha$$

$$\alpha = \frac{1}{0.00045 + 0.04455} = 22.222$$

$$P(\text{Fraud} = T \mid \text{Foreign purchase} = T, \text{travel} = T)$$

$$= \alpha \times 0.00045$$

$$= 22.222 \times 0.00045$$

$$= 0.01$$

$$\therefore P(\text{Fraud} = T \mid \text{Foreign purchase} = T, \text{travel} = T)$$

$$= 1\%$$
